SUMMARY

Final-year Data Science student specialising in AI/ML who works end to end: takes an unfamiliar problem — a backend, an API, something awkward from real life — and turns it into software that runs and gets used. IBM Full Stack Software Developer and eCPPT certified, with deployed web applications and offline security tooling behind both. Seeking AI/ML or software engineering roles and internships.

CERTIFICATIONS

IBM Full Stack Software Developer Professional Certificate, Coursera · September 2026 · 15 courses: React, Node.js/Express, Django + SQL, Flask, containers (Docker, Kubernetes, OpenShift), microservices & serverless · [credential](#)

eCPPT — Certified Professional Penetration Tester, INE Security · September 2026 · hands-on practical exam · ID 194431871

Microsoft AI & ML Engineering Professional Certificate, Coursera · in progress

TECHNICAL SKILLS

Languages: Python · JavaScript · Java · C · SQL · PHP · Bash

AI & ML: scikit-learn · pandas · NumPy · supervised learning & model evaluation · computer vision (OpenCV, CLIP zero-shot inference) · NLP fundamentals

Web & Backend: React · Node.js / Express · Django · Flask · REST APIs · MySQL · HTML/CSS

Cloud & Tools: Git & GitHub · Docker & containers · CI/CD · serverless deployment (Cloudflare Workers) · Linux · AI-assisted development workflows

Security: Web & network penetration testing · reverse engineering (Ghidra, angr) · forensics & traffic analysis

PROJECTS

[CTF Workbench](#) · [offline-first security toolkit](#) — *Bash, Python, angr, Ghidra*

- Designed and maintain the tooling layer for a CTF team preparing for the Black Hat MEA finals, built around a triage script that fingerprints any unknown file and routes it to the right category workflow.
- Wrote tooling across crypto (multi-attack RSA, XOR, oracle harness), forensics (pcap, USB HID, stego, memory), reverse engineering (angr symbolic execution, headless Ghidra) and web, plus a shared "already tried" log that stopped the team repeating dead ends.

[Chess Tournament Pairing Interface](#) — *JavaScript, Web Workers, Cloudflare Workers*

- Saw players struggling with large pairing tables at tournaments and built a live tool that takes a Chess-Results URL or ID and shows only what a player needs: opponent, board, round and colour.
- Shipped dependency-free, with parsing moved off the main thread via Web Workers and deployed on Cloudflare Workers.

[Eloria · self-publishing platform for a non-technical writer](#) — *JavaScript, GitHub REST API, GitHub Pages*

- Built a novel-publishing site for an author with no technical background: content lives in a single JSON file, edits save as browser-side drafts, and one button commits them straight to GitHub through the Contents API — no build step, no CMS, no hosting cost.
- Designed for a non-developer to run alone — Arabic setup guide, scoped access token, automatic cover-image compression, and backup/import plus a manual upload path so a failed publish never loses work.

[Zero-Shot Visual Detector](#) — *Python, OpenCLIP, OpenCV*

- Real-time webcam detector built on CLIP image-text similarity: the target is described in plain language and each frame scored against that description, so it needs no training data or fine-tuning, with a runtime threshold control to trade precision against recall.

Also built: a PHP/MySQL clinic management system (registration, appointments, cancellations); the full-stack capstone applications from the IBM certificate — React storefront, Express REST API, Django app deployed to cloud; and several deployed business websites.

EDUCATION

Saudi Electronic University — B.Sc. Data Science, elective track in Artificial Intelligence · Expected 2027

Relevant coursework: Machine Learning · Natural Language Processing · Computer Vision · Data Structures & Algorithms · Database Systems · Operating Systems · Statistics · Linear Algebra

Languages: Arabic — native · English — full professional proficiency

ACHIEVEMENTS & INVOLVEMENT

- Qualified for the Black Hat MEA CTF Finals** (Riyadh, December 2026) — team tooling and first-pass triage lead.
- Miyathon Hackathon** — cleared the online bootcamp stage with my team; finalist selection pending.
- Member, SEU Cybersecurity Club** (2025–present) — CTF competitions and a mobile app penetration testing workshop.
- Competitive chess** — Gambit and SEU chess clubs; FIDE-rated and Saudi Chess Federation tournaments, including Ithra 2026.
- Industry events:** Black Hat MEA 2025 · LEAP 2026 · SDAIA workshop, ICAN AI Conference (KSU) · MECC 2025 hackathon bootcamp.
